Medical Service Corps officers can compete for advanced civilian schooling and internship opportunities in various specialties, including health facility planning.

- Health Facility Planning Internship.
- Master's (school of choice).
- Ph.D. (school of choice).

Health Facility Planning Capability

The Army's health facility planning capability is provided by a multi-disciplinary team of health facility planners, architects, engineers, nurses, biomedical equipment technicians, and information technology professionals who work closely together to support the planning, programming design, construction, outfitting, and transition of health care facilities. HFGPA is the repository for this capability in the Army and provides deployable and reachback Facility Life Cycle Management (FLCM) support to Joint Task Forces Surgeons, Medical Task Forces, Combat Support Hospitals, Medical Brigades, and Medical Commands (Deployment Support).

Theater Hospital, Balad, Iraq

Health Facility Planning Agency

The Health Facility Planning Agency (HFGPA) was established on September 1, 1975 to be responsible to the Army Surgeon General for the centralized management of the Army Health Facility Construction Program. In the 1990s, HFGPA became responsible to the Commander, MEDCOM for the centralized management of the Army Health Facility Life Cycle Management Program. Today, HFGPA provides health facility expertise, manages programs, and executes projects to enable Army readiness, support Army Medicine's combat casualty care, and promote a system of health for our Warriors and their Families. HFGPA is the sole generating platform for health facility planning and management capability supporting the Land Component.
